

# Automated Monitoring and Targeting of energy usage

With energy costs on the increase,  
the need to reduce energy consumption  
is now key to all organisations.

To effectively reduce energy consumption, companies need to fully understand what equipment they have on their sites and how to operate and maintain them in the most efficient way. Sites are getting more and more complex on the supply and demand side, with legislations and new technologies driving to further lower carbon footprint or create carbon neutral buildings.

Access to the data from these complex systems is crucial to understand energy consumption behaviours, patterns and to set up and maintain a sustainable energy strategy.

With the help of Sub Metering or automated monitoring and targeting systems (aM&T), organisations will be able to automatically collect, visualise and analyse energy consumption and waste from many different sources (electricity, gas, water, heat, renewables, oil etc). The aM&T system will enable companies to focus on defining short and long term strategies to comply with legislation and energy saving policies.

Moreover, integrating aM&T and BEMS systems will help achieve energy reduction targets. Our industry-leading Sub Metering and aM&T solutions build on IMServ's rich heritage in data collection and unrivalled expertise in metering.

IMServ can recommend and install solutions that meet precise requirements, and will deliver measurable value to your business. With the use of IMServ's aM&T solutions, in conjunction with Energy DataVision (EDV), our customers can benefit from:

- Near Real Time energy data, synchronised to show an entire portfolio of utility and Sub Meters
- Automatic industry proven and bespoke energy reports which promote sustainability credentials and support behaviour change
- Tracked energy usage allowing the visualisation of consumption patterns, therefore reducing energy waste
- Managing energy programs including benchmarking, league tables and reporting
- Data translated into appropriate formats for different stakeholder groups

*IMServ provides bespoke aM&T solutions to a wide range of industry sectors.*
