

Water Metering Solutions

delivering **insight**

Why Water Metering?

Prices of utilities are rising, and water is no exception. With everyone tightening their budgets, now is the time to see just how much you are spending, where and why? Water AMR (Automated Meter Reading,) enables you to take control of your water usage by monitoring your consumption and visualising your data within our online web data portal EDV (Energy Data Vision,) giving you the power to monitor and control your usage. The versatility of water metering is extensive, and can be used by landlords and businesses alike. With the use of submetering technology, we can measure water usage of any unit, process, building or site. Once we have installed your Water AMR solution you can compare sites, forecast your budget and incentivise your sites to be more efficient. We can cater for a range of different applications. Whether it is managing your overall spend or keeping an eye on any maintenance issues IMServ caters for almost any type of water portfolio, and can tailor solutions to create a bespoke service specific to your company's needs.

How?

IMServ manage the end to end process, from the understanding of your needs, through to management of the approval process with regional water companies. But the benefits of our service do not stop there. Our 24 hour bureau team will keep you up to date throughout the approval and installation programme and once your service is up and running, managing your data could not be easier. By just logging on to our secure online portal EDV you can view and manage your entire portfolio using both historical and live data. IMServ's expert bureau team will be on hand should you require any tailored services such as Bill Validation, tenant billing, or a managed bureau provision.

Why IMServ?

With the aim of being the UK's favourite energy monitoring and controls solutions provider, IMServ boasts an all inclusive portfolio that covers data collection, analysis, reporting, carbon management and energy control solutions. Our integrated 3-step process of monitoring, visualisation and control enables us to deliver significant cost savings to our customers. Coupled with IMServ's wealth of experience within the Data Collection Industry our 3 step approach enables us to offer a high quality, tailored Water AMR solution.

"English Heritage are pleased with how Invensys IMServ rolled out Water AMR for their portfolio. IMServ took away the metering and data complexities to ensure energy intelligence was provided in a professional and easy-to-understand way. We are now able to use the data presented to benchmark and monitoring our water consumption across our high water using properties."

Caroline Cattini, Senior Building Services Engineer and Energy Manager, English Heritage [July 2012]

About IMServ?

IMServ was established in 1992 as UKDCS, the UK's only Data Collector. Over time the company has branched out to cover other services and as a result became IMServ, a part of Invensys Operations Management (IOM,) a division of Invensys Plc. IMServ offices are based in Milton Keynes. IOM are based in London, employing over 20,000 people in 50 countries, providing technology, software systems and consulting services globally.
