

DATAVISION

Powered by Energy Data

Introducing DataVision

If you are a user of energy or an energy service provider, DataVision can provide insight into energy and its usage efficiency.

DataVision gives comprehensive, holistic view of your company's energy portfolio, allowing you to explore whole sites over time; sub meters or building zones against operational hours; and across portfolios for building and employee efficiency, to understand where energy is being used and how effectively.

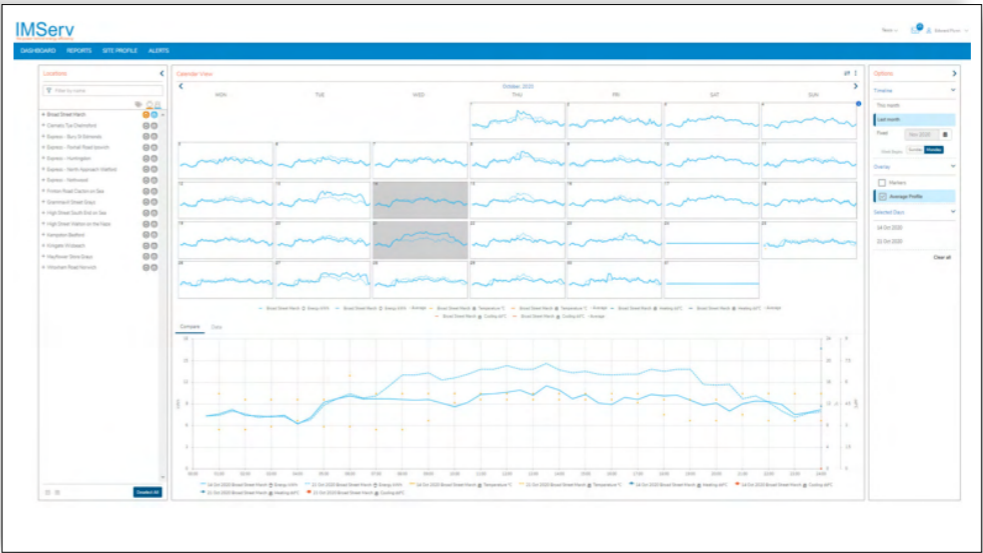

From drilling down into interactive dashboards, exploring IMServ's range of default reporting templates or setting up alerts and stakeholder reports for explicit analysis, users can review consumption, generation, spend or emissions.

IMServ will automatically set up the customer's account with meters and sites default values, with no input required from the customer. IMServ will also provide tools for the user to fine tune the setup, placing the end user in control of their utility usage and allowing service providers to deliver tangible benefits to their end customers.

IMServ's new simplified energy management platform DataVision brings an award winning international energy management platform customised to the UK market.

Service Features

Benefits:

- ✓ Automatic account set up requiring no customer configuration.
- ✓ Automatic report generation without customer interaction.
- ✓ Intuitive, easy to use, self-service application.
- ✓ Multi utility data integration.
- ✓ Other collectors data loading.

Service Features

Benefits:

- ✓ Data independence.
- ✓ Award winning software.
- ✓ Device responsive design.
- ✓ Supporting services lines.
- ✓ Portfolio management.
- ✓ UK hosted application, with full disaster recovery back up.

Functionality Features

Key Benefits:

- ✓ Automatic loading of IMServ collected data.
- ✓ Visibility of interval, register and multi utility data.
- ✓ Data loading capabilities from other sources.
- ✓ Also supports, sub metering, generation and channel level data.
- ✓ Quick display dashboards appropriate to customer portfolio.
- ✓ Selection of energy management reports.
- ✓ Site location maps.
- ✓ Generation and usage comparisons.
- ✓ Weather analysis.
- ✓ Ranking league tables.
- ✓ Usage against cost.
- ✓ Emission calculations.

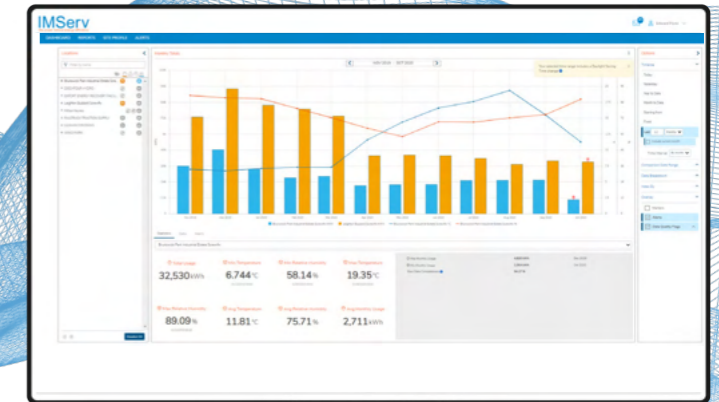

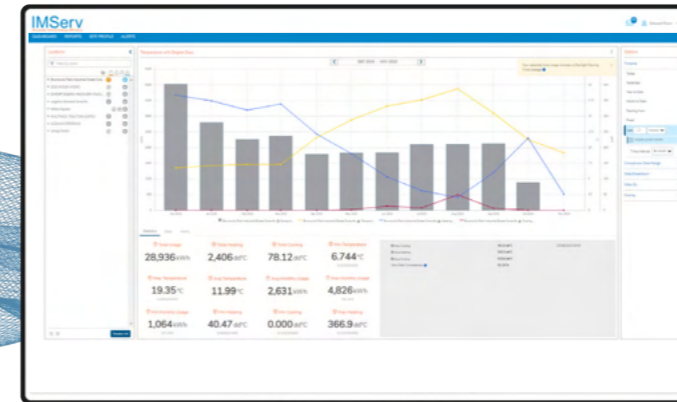

Functionality Features

Key Benefits:

- ✓ Aggregated comparisons.
- ✓ Normalisation against employee numbers and floor area.
- ✓ Pre-defined values for operational hours, area and other standing data that can be customised by user.
- ✓ Meter grouping for different site types.
- ✓ Scheduled data extraction for connecting to other systems.
- ✓ Energy exception alerts.
- ✓ Stakeholder reporting.

Benefits

- ✓ Multi responsive design.
- ✓ Unlimited user accounts.
- ✓ Access to historic data.
- ✓ Online view of energy consumption in graphical and tabular format.
- ✓ Export of online reporting and backing data.
- ✓ Interactive dashboards.
- ✓ Predefined report templates.
- ✓ Report scheduling.
- ✓ SFTP data extraction.
- ✓ Alerts and stakeholder reports.

About IMServ

Founded in 1992 as part of the UK electricity market deregulation, IMServ originated as the sole electricity data collector, helping establish the process of energy data collection and verification in the UK.

IMServ has since maintained its position as one of the UK's leading data collection and energy metering experts, delivering award winning services to more customers in more places, meeting industry targets and becoming a benchmark for excellence.

As customers' energy strategies evolved, IMServ's onsite multi-utility metering services and online data visualisation tools have given customers the freedom to manage their own energy analysis by providing access to data intelligence on 'how', 'when' and 'where' energy is being used.

Specialist end-to-end energy management solutions, combined with experienced engineers, extensive industry knowledge and a powerful web tool, DataVision (DV), can deliver tangible energy, carbon and cost savings to your organisation.

IMServ delivers services to a vast range of commercial energy users, from energy Suppliers through to end user businesses, energy consultants and to the Electricity Industry itself. IMServ can support those new to energy data management and regulation through to experienced Energy Management teams.

Regardless of market sector, business size, regulatory requirements or resources available to manage your energy portfolio, IMServ can deliver quality data services tailored to your organisation's needs.

Other Services

In addition to IMServ's range of specialist Data Collection services, you can also select from a wide range of solutions to support your energy management and efficiency targets:

- ✓ Half Hourly Meter Operations.
- ✓ Non Half Hourly Meter Operations.
- ✓ Sub Metering Services.
- ✓ Gas Services.
- ✓ Water Services.
- ✓ Meter Purchasing.
- ✓ Import/Export Metering.
- ✓ Data Retrieval.
- ✓ Data Aggregation & Processing.
- ✓ DataVision (DV).
- ✓ Energy Management reporting.
- ✓ SFTP data distribution.
- ✓ Energy Management Bureau.
- ✓ Water Efficiency Consultancy.

Niche Metering Services:

- ✓ Metal Clad Cut Outs.
- ✓ Asbestos found on Metal Clad.
- ✓ Shared Cut Outs.
- ✓ Working Around Asbestos.
- ✓ Installation in difficult areas.

At a Glance

- ✓ Full UK coverage of Data Collection and Meter Operation services.
- ✓ Fully compliant and certified to industry service standards.
- ✓ Collecting 25% of the UK's entire electricity consumption.
- ✓ Remotely monitoring over 250,000 metering points.
- ✓ 80 billion units of energy data monitored annually.
- ✓ Independent of all Utility companies and meter manufacturers.
- ✓ Regularly exceeding data performance targets.
- ✓ Providing fiscal grade metering and data collection services.
- ✓ Fully qualified Balancing & Settlement Code (BSC) Party Agent for Half Hourly and Non Half Hourly Data Collection, Data Aggregation and Meter Operations.
- ✓ Managed Bureau service delivering remote monitoring of complex energy systems.
